INTRODUCTION

This report is a summary of big game harvest information and monitoring efforts for eight species (mule deer, Rocky Mountain elk, pronghorn, Shiras moose, American bison, desert bighorn sheep, Rocky Mountain bighorn sheep, and mountain goat) in the state of Utah. These species were managed based on species management plans developed through a public review process and approved by Utah's Wildlife Board. This report represents the big game portion of Federal Aid Project W-65-M, segments 72 and 73, grant agreement periods July 1, 2023 through June 30, 2024, and July 1, 2024 through June 30, 2025, respectively. This Federal Aid project covers the 2024–25 hunting seasons, big game surveys conducted in 2024 and 2025, and reports statewide trends for all big game species.

METHODS

Annual Harvest Surveys

Limited-entry, antlerless, and general-season harvest for all big game species were determined by mandatory online/telephone reporting. Mitigation/depredation deer, elk, and pronghorn harvest were determined by voluntary web/telephone reporting.

Based on results from the surveys and online reports, harvest data were projected by the total number of permits to obtain estimates of the number of animals harvested, number of hunters afield, and number of days hunted. To minimize error, harvest data for individual hunts, management units, and statewide totals were projected separately. As such, the sum of hunt estimates and unit estimates may not always equal the statewide totals. Additionally, success rates were calculated from the raw data and may not always equal the projected harvest divided by the projected number of hunters afield.

Harvest Sex and Age Composition

For mountain goat, moose, pronghorn, and limited-entry elk, average ages were obtained from counts of annual cementum rings on teeth submitted by hunters. During general-season deer hunts, DWR personnel and volunteers at checkstations gathered information on age and antler size. The sex composition of harvested animals was determined through questions on telephone and online surveys.

Population Sex and Age Composition

Population sex and age composition were determined through the use of ground and/or aerial classification counts. Ground classification was done using a random process during early morning and evening hours, whereas aerial trend counts occurred when counting conditions were favorable and covered all appropriate fall, winter and/or spring use areas. Data collected during classification and trend counts were used to determine annual production and survival of young (doe: fawn, cow: calf ratios), as well as the ratio of bucks or bulls to females in the herds. For deer, annual ground classification counts were conducted immediately after the general-season harvest. For the remaining species, a combination of ground classification counts and aerial trend counts were used to determine population sex and age composition.

Population Modeling

All the data collected on harvest, survival, recruitment, and population structure were used in computer modeling applications for big game populations in Utah. Computer models were used to help determine the status of the population (i.e., growing, declining, stable), the future structure of the population under various harvest scenarios, and the number of permits to be allocated.

Big Game Movements and Seasonal Distribution

Trapping and marking projects were carried out periodically where needed to determine direction and extent of herd movements. That information was obtained through GPS collars to help track movements. Those data were used to design hunts to ensure proper harvest. Ground observations were also used to determine movements and seasonal distribution of big game species.

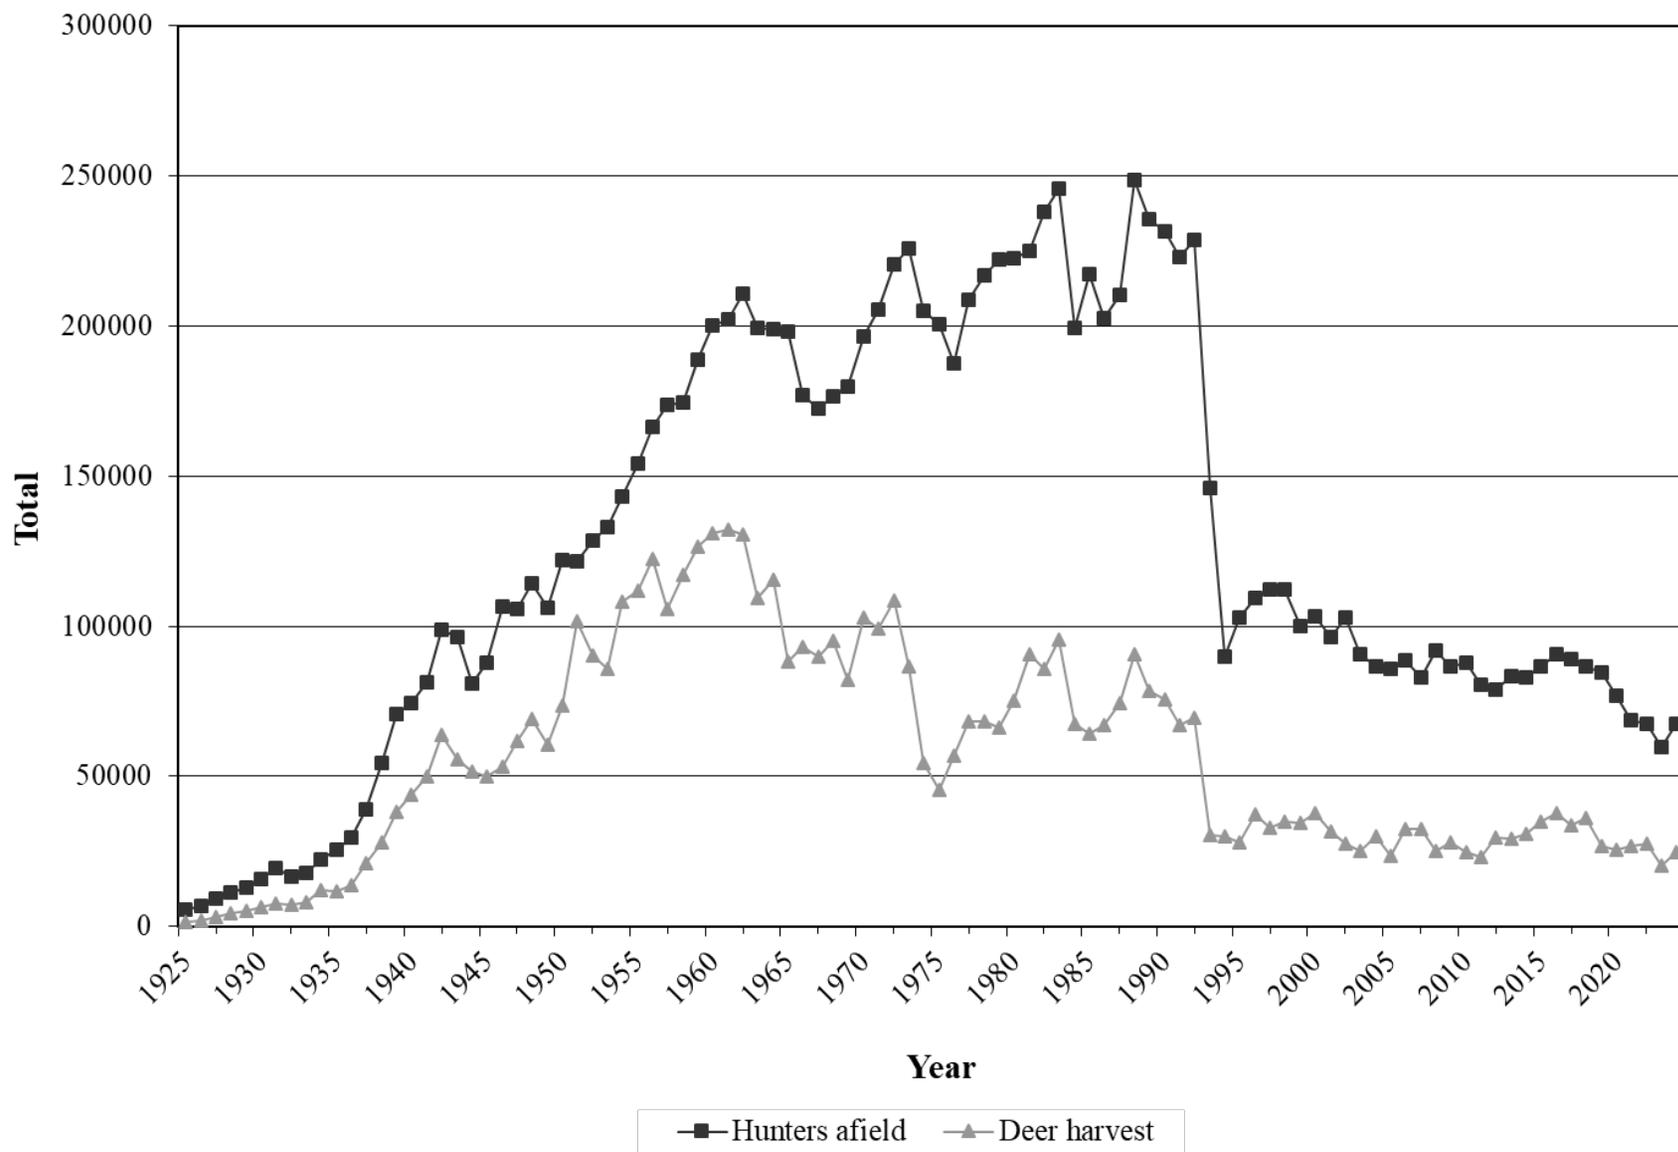

Management Unit Boundaries

Utah has thirty wildlife management units that serve as the basis for big game management recommendations. Boundaries vary slightly by species, so for exact boundary descriptions, refer to that species Unit Management Plan.

MULE DEER

Statewide trends of mule deer harvest statistics, Utah 1925–2024.

Statewide mule deer harvest statistics, Utah 1925–2024.
