Appendix: Historical cougar harvest by hunt unit .....	20

## **INTRODUCTION**

The cougar harvest report presents cougar harvest and hunter effort trends across the state of Utah, based on data collected from cougar hunters. This report represents the cougar portion of Federal Aid Project W-65-M, segments 62 and 63, grant agreement periods October 1, 2013 through June 30, 2014 and July 1, 2014 through June 30, 2015, respectively. This Federal Aid project covers cougar hunting season 2013-2014.

There were a total of 48 limited-entry, split and harvest-objective cougar hunting units during the 2013-2014 season. Eight of these units were managed through a limited-entry permit system, where a hunter had to apply for and draw from a pool of limited permits. The hunter was allowed to hunt the entire limited-entry season, or until the permit was filled. Sixteen units were managed through a harvest-objective system, where a harvest quota was set and an unlimited number of hunters could hunt. Harvest-objective units remained open until the larger cougar management area total quota, or female subquota, was met. If either of these quotas were met before the end of the harvest-objective season, all harvest-objective units within that cougar management area closed early. The only exception was if an individual unit had a minimum quota, in which case that unit did not close unless its minimum quota had also been met. The remaining 24 units were managed through a split hunting season system, with the first half of the season managed through a limited-entry permit system. Five days after the close of the limited-entry season, the split units reopened under the harvest-objective system described above. Limited-entry permits on split units became valid statewide harvest-objective permits if hunters did not fill their tags during the limited-entry season.

Applicants who drew a limited-entry permit for the 2013-2014 cougar seasons were required to wait 3 years before applying for another permit. The waiting period did not apply to harvest-objective permit holders. The season limit was one cougar. Females with kittens, or kittens with spots, were not legal to harvest.

Cougar pursuit was allowed in all 48 cougar units during the 2013-2014 season provided pursuers obtained a valid cougar pursuit permit. An unlimited number of pursuit-only permits, valid on any open unit statewide, were available. Hunters who obtained a limited-entry or harvest-objective permit could pursue cougar on the unit for which the permit was valid.

## **Season Dates**

For the 2013-2014 year, the limited-entry hunting season for limited-entry only units opened November 13, 2013 and closed May 30, 2014. The limited-entry hunting season in split units opened November 13, 2013 and closed February 26, 2014, at which time these units became harvest-objective units from March 5, 2014 through May 30, 2014. The harvest-objective season for harvest-objective only units opened November 13, 2013 and closed November 9, 2014. Cougar pursuit was allowed in all 48 units from November 13, 2013 through May 30, 2014.

## **METHODS**

All successful hunters were required to have their cougar checked by a Division of Wildlife Resources office or officer within 48 hours of harvest. At that time tooth samples were collected and a permanent tag affixed. Cougar harvest and hunter effort information was also collected. Teeth were sectioned and cementum annuli counted by an independent lab to estimate age of harvested cougar. Cougars aged to be 3-yrs or older were considered adults for the purposes of calculating percent adult females in the harvest. Cougar pursuit information was obtained using a telephone survey of a statistically-valid random sample of cougar pursuit permit holders.

Harvest data from depredating cougar were taken from damage reports received from USDA-APHIS Wildlife Services. Livestock operators could kill damaging cougar and were required to have the carcass checked by a Division officer within 48 hours. Harvest information was collected at that time. Other mortality includes DWR control, roadkill, poaching, found dead, etc.

This annual report presents the most complete and accurate summary of cougar harvest data available at the time of publication. Occasionally, we will adjust a previous years' harvest numbers in a subsequent report as more data were made available after publication. This is typically the case with counts of Wildlife Services (depredation) mortality, and only rarely will counts of hunter harvest need adjustment. Also, age data from cougars harvested during the most recent summer or fall seasons are often not available at the time this report is published each year. Therefore, age data and survival information are tentative for the current year, and will be finalized in the following year's report. Where numbers or statistics differ between reports, the most recent annual report should always be the most accurate and up-to-date.

## **RESULTS**

For the 2013-2014 cougar season, 306 limited-entry permits and 983 harvest-objective permits were sold. Total limited-entry permits included 285 unit-specific limited-entry permits, 19 regional conservation permits, one statewide conservation permit, and one statewide sportsman's permit. A total of 337 cougars were harvested by hunters during the 2013-2014 sport season.

18 cougars were taken by Wildlife Services during the 2013-2014 season, and there were an additional 21 other mortalities (roadkill, found dead, DWR control). A total of 738 cougar pursuit permits were sold and 612 pursuers went afield during the 2013-2014 cougar pursuit season. Cougars treed per pursuer was 5.4, with 0.23 cougars treed per day-afield.

Cougar permits sold since the implementation of limited-entry hunts, Utah 1990–2014.
