Appendix: Historical cougar harvest by hunt unit .....	12

## **INTRODUCTION**

The cougar harvest report presents cougar harvest and hunter effort trends across the state of Utah, based on data collected from cougar hunters. This report represents the cougar portion of Federal Aid Project W-65-M, segments 72 and 73, grant agreement period July 1, 2023 through June 30, 2024 and July 1, 2024 through June 30, 2025, respectively. This Federal Aid project covers cougar hunting season 2024, as outlined in the Utah Cougar Guidebook 2024.

This annual report presents the most complete and accurate summary of cougar harvest data available at the time of publication. Occasionally, we will adjust a previous years' harvest numbers in a subsequent report if more data are made available after publication. This is typically the case with counts of depredation (Wildlife Services/UDAF removal) mortality, and only rarely do counts of hunter-harvest need adjustment. In addition, age data from cougars harvested during the most recent summer or fall seasons are often not available at the time this report is published. Therefore, age data and survival data are tentative for the current year, and will be finalized in the following year's report. Where data differ between reports, the most recent annual report should always be the most accurate and up-to-date.

## **METHODS**

### **Statewide Cougar Pursuit and Hunting**

In March 2023, the Utah Legislature changed the state's cougar hunting season, and cougar regulatory cycle, to run from Jan. 1 to Dec. 31. With multiple adjustments to the cougar regulatory timeframe over the last several years, in order to reliably track harvest trends and maintain consistency with historical data, this annual report still defines the cougar "year" or "season" as **November to November** of the following year.

New Legislative changes allow a person to hunt or pursue cougars year-round with a valid Utah hunting or combination license – no additional cougar permit required. Hunters could hunt cougars using any legal weapon, including traps and snares provided they have a valid Utah trap registration license and follow current trapping rules and guidelines. Cougar harvest-objective quotas were discontinued and hunters were allowed to take an unlimited number of cougars in any Utah cougar management unit. Female cougars with kittens, or kittens with spots, were not legal to harvest.

### **Harvest Data Collection**

All successful hunters were required to have their cougar checked at a Division office or by a Division employee within 48 hours of harvest. At that time, tooth samples were collected and a permanent tag affixed. Cougar harvest and hunter effort information were also collected. Teeth were sectioned and cementum annuli counted by an independent lab to estimate age of harvested cougar. Cougars aged to be 3-yrs or older were considered adults for the purposes of calculating percent adult females in the harvest. With the elimination of the cougar pursuit permit, cougar pursuit data was not collected.

## **Livestock Depredation**

Harvest data from depredating cougar were taken from damage reports received from the Utah Department of Agriculture (UDAF). Prior to 2023, USDA-APHIS Wildlife Services provided all depredation services and reports. Livestock operators could kill damaging cougar and were required to have the carcass checked by a Division officer within 48 hours. Harvest information was collected at that time. Other mortality includes DWR control, roadkill, poaching, found dead, etc.

## **RESULTS**

From November 1, 2023 to October 31, 2024 (hereafter 2024), hunters harvested 530 cougars. 16 cougars were taken by UDAF, and 8 cougars were killed by DWR personnel or landowners for nuisance or depredation control, and there were an additional 14 other mortalities (roadkill, other, DWR control).

Statewide historical cougar harvest statistics, Utah 1971–1989.

Year	Hunters afield	Harvest	Hunter-days afield	Hunter-days / hunter	Hunter-days / cougar	Cougars / hunter
