In order to conform to guidelines published in the Federal Falconry Permit Regulations (50 CFR 1-b-21), the Division of Wildlife Resources requires that all applicants for a Utah Falconry Certificate of Registration (COR) take and pass an examination designed to test their knowledge of falconry, regulations, housing and care of raptors and diseases. The attached list of reading materials, available at bookstores and libraries, are valuable references in preparation for the examination. A minimum score of 80% is required to pass. If necessary, you may re-test after 14 days. The test is given at all Division offices by appointment only.

After you have passed the examination, your facilities and equipment for housing and weathering a raptor will be inspected. If your facilities meet the minimum criteria you will be given an application for a Utah Falconry COR. Please complete it accurately and completely and return it with your sponsor's signature and the appropriate COR fee. Your COR will then be issued. After your COR is issued, you must then apply for a federal falconry permit through the U.S. Fish and Wildlife Service Migratory Bird Permit Office.

A copy of your state COR and federal permit must be shown at the time you purchase your Raptor Capture Permit. Please refer to the Utah Falconry Proclamation for season dates and other restrictions.

If you have any questions, or would like to make arrangements for the exam or facilities inspection, please contact the closest Division office. Office locations and phone numbers are listed in this guide.

**Summary of Steps:**

1. Read and understand the Utah Falconry Proclamation and other falconry resources.
2. Take and pass the Utah Falconry test with a score of 80% or better.
3. Have facilities and equipment inspected and approved.
4. Apply for state Falconry COR and Federal Falconry Permit.
5. After receiving a COR and Federal Permit, you can purchase a Raptor Capture Permit.

**Don’t wait until the last minute, these steps take time to complete.** You need to allow enough time to take care of any unforeseen problems. Plan on at least six to eight weeks to obtain your COR and federal falconry permit before obtaining a Raptor Capture Permit.
Minimum Housing and Equipment
Requirements for Captive Raptors

Proper housing is not only essential to successful falconry, but is required by law to assure adequate care for captive birds. Those desiring to construct hawk houses or "mews" should consult a reliable falconry text for specifications. Raptors can be housed in a home or garage, utilizing the backyard to meet the weathering needs of the birds.

Remember, a good falconer is judged by the condition of his or her birds.

1. Indoor facilities (mews) for loose raptors must be large enough to allow easy access for care of the birds housed there. Each bird must be allowed enough space to fully extend its wings. There must be at least one window for ventilation, protected on the inside by vertical bars spaced narrower than the width of the bird's body. Adequate perches must be provided. The floor must permit easy cleaning and must be well drained. A secure door that is easily closed is a necessity. Sanitation around the perch is also a must.

2. Outdoor facilities must protect the bird from the elements as well as cats, dogs and avian predators. The enclosure must be large enough to insure the tethered bird cannot strike the sides when flying from the perch.

3. The following pieces of equipment must be in possession of the applicant before a COR can be obtained:
   a. Jesses       d. Outdoor perches
   b. Leashes and swivels   e. Weighing device
   c. Bath container
