John Kimball
Director

“Finding out how many there are left is the least of the purposes of game census.

Measuring the response of game populations to changes – deliberate or accidental – in their environment is the big purpose.

Continuous census is the yardstick of success or failure in conservation.”

Aldo Leopold, 1932

Appendix D: Summary of Harvest: Questionnaire Returns	170

ANNUAL PERFORMANCE REPORT

State: UTAH

Grant Number: W-16-RD

Segment: 4

Grant Title: Statewide Upland Game Management Surveys and Inventories

Grant Agreement Period: Oct. 1, 1999 thru Feb. 28, 2001

Abstract: This report identifies progress and accomplishments of Segment No. 4 objectives, 1999-2001. Results of annual population surveys and inventories conducted during the segment W-16-RD-3 and harvest surveys conducted under W-16-RD-4 along with summaries of long-term trends of population indices derived and harvest estimates will be included in the Utah Upland Game Annual Report 1999. Data obtained in 1999 will be compared to 1998 and long-term averages.

The Federal Aid Annual Performance Report for W-16-RD-3 will be included in the Utah Upland Game Annual Report 1999, rather than this Annual Performance Report because of the annual reporting scheme initiated under W-65-R and because of the way population surveys and inventories and harvest data are collected.

Annual population surveys and inventories are collected during one segment and harvest surveys are conducted during the subsequent segment. The Utah Upland Game Annual Report is an attempt to summarize population survey and inventory data and harvest estimates for the same calendar year.

This reporting scheme may seem awkward, especially when one looks a Utah Upland Game Annual Report and sees a copy of a Federal Aid Annual Performance Report included for a segment that ended before harvest survey data was actually collected.

Because this reporting scheme is somewhat confusing, but makes the most sense from a biological perspective to report population survey and inventory information for the same calendar year as harvest, it is hoped that the above explanation clarifies any confusion. Further, it is recommended that the reporting scheme remain the same.

The 1999 Utah Upland Game Annual Report (includes survey and inventory data from W-16-RD-3 and harvest data from W-16-RD-4) was published in March 2001 and the 2000 Utah Upland Game Annual Report (includes survey and inventory data from W-16-RD-4 and harvest data from a new grant, segment 1) will be published in August 2001.

I. OBJECTIVES OF GRANT PROPOSAL:

1. To annually monitor and evaluate 16 upland game species harvest and populations in Utah using appropriate surveys and inventories--on-going objective.
2. To administer Utah's upland game programs and to manage 16 upland game species based on population data obtained through Objective 1--on-going objective.
3. In conjunction with the Utah State University Extension Fisheries and Wildlife Specialist, compile, develop and publish a handbook pertaining to field identification, basic biology and ecology and sexing and aging techniques for Utah upland game.

Progress Statement and Summary of Work Completed During The Segment For Each Objective:

1. To annually monitor and evaluate 16 upland game species harvest and populations in Utah using appropriate surveys and inventories.

Ongoing Objective. Annual inventory procedures for ring-necked pheasants included winter sex ratio counts and summer roadside counts. The winter sex ratio counts were conducted from December 15, 1999 through February 10, 2000, as snow cover conditions allowed. Indices derived include hen-cock ratios and pheasants observed per 100 hours. Annual summer roadside counts (three or more per route) were conducted from July 22-August 22 on permanently established routes. Indices derived include pheasants per mile, young per mile, young per hen, mean brood and percent of hens with young. Pheasant crowing territory counts were selectively conducted by DWR's northern and central regions. Crowing territory counts are used by biologists to determine if habitat improvement projects are successful in increasing populations, and also as another index to local pheasant breeding populations.

Mourning dove breeding population trend was determined via the annual call count survey. This survey is part of a nationwide survey administered by the U. S. Fish and Wildlife Service. Call counts are conducted over 15 permanent, 20-mile routes. One count was made on each route between May 20-30, 2000.

Random brood counts were conducted on chukar and Hungarian partridge, forest grouse (ruffed and blue), sage grouse, sharp-tailed grouse, wild turkey and quail from June 15-August 22. Indices derived for each species include mean brood size, young per 100 adults and birds observed per 100 hours of effort.

Sage grouse strutting ground counts and sharp-tailed grouse dancing ground counts were conducted from March 15-May 15. Total cocks counted, average cocks per ground and percent change from 1999 for comparable grounds were determined on a county basis.

The Gambel's quail long period waterhole counts were completed in July and August. Limited valley quail random brood counts were made in several counties.

Cottontail rabbit roadside counts were conducted over pre-established routes between July 15 and August 22. Indices derived include rabbits per mile and young per 100 adults.

Harvest questionnaires were mailed to determine the harvest of upland game birds, cottontail rabbit, and snowshoe hare. A sample of eligible licensees from the current year's (1999) resident small game license file and combination license file was used. The modified computerized pull-apart mailer was again used to obtain harvest data. Separate questionnaires were mailed to all ptarmigan, band-tailed pigeon, sage-grouse, sharp-tailed grouse and wild turkey permittees. Indices derived include total hunters, hunter-days, total harvest and hunter success per day, plus success for each season.

The upland game questionnaires were processed by the Utah Division of Wildlife Resources Public Services Section. Ptarmigan, band-tailed pigeon, sage-grouse, sharp-tailed grouse and wild turkey questionnaires were analyzed separately by Utah Division of Wildlife Resources Wildlife Section personnel.

Upland game hunters were checked at checking stations, and random field checks were made during each hunting season. Indices derived include bag per hunter (per day), bag per 100 hours, average hours per hunter-day and average hours per bird bagged. Additional sex and age composition data were compiled for some species using wing samples collected at checking stations.

One ten mile helicopter transect was flown in Utah's west desert in August 2000 to determine chukar population densities. Index derived was chukars per mile. This survey is flown only in Utah's west desert. Data derived from this survey has been very useful in compiling a fall hunt forecast for chukars.

One snowshoe hare track and pellet survey was conducted in Cache County. This is currently the only data being collected on Utah snowshoe hares outside of harvest data. This survey seems to be useful so far. We hope to collect this data into the future and to conduct a correlation analysis with harvest data to see if we might be able to predict harvest levels based on the track and pellet county survey.

The winter flock count survey for wild turkey was fully implemented during the winter 1999-2000. This technique seems to provide a useful index to Utah's turkey population. Data is used by local biologists to derive turkey harvest recommendations. We will continue to use this technique into the future to assess turkey populations.

New sage and sharp-tailed grouse leks were described and mapped during the segment as located.

Completion of the 4-Corners Band-tailed Pigeon Management Plan increased dramatically during this segment. A rewrite of the plan was completed and the plan was shared with the Pacific and Central Flyway Councils.

2. Ongoing Objective. To administer Utah's upland game programs and to manage 16 upland game species based on population data obtained through Objective 1.

Data collected in Objective 1 was used by DWR personnel to formulate harvest recommendations for 16 species of upland game in Utah. DWR personnel met in April 2000 to formulate harvest recommendations for fall 2000 upland game seasons. DWR recommendations were presented at 5 Regional Advisory Councils and the public throughout the state in May. In June, recommendations were presented to the Utah Wildlife Board who made final decisions for recommendations to include in the 1999-2000 and 2000-2001 Utah Upland Game Proclamations. A two-year Upland Game Proclamation was adopted by the Utah Wildlife Board.

In October and November 2000, the project leader also presented DWR recommendations for wild turkey conservation permits and limited entry turkey hunting unit permits to 5 Regional Advisory Councils, the public and the Utah Wildlife Board. A separate Turkey Addendum to the Upland Game Proclamation was compiled, published and distributed. The purpose of the Turkey Addendum was to provide for the publishing of all Utah turkey hunting regulations, permit numbers and season dates in one document available at the time that turkey permit applications are submitted by hunters.

3. Objective To Be Completed Over 2 Years. In conjunction with the Utah State University Extension Fisheries and Wildlife Specialist, compile, develop and publish a handbook pertaining to field identification, basic biology and ecology and sexing and aging techniques for Utah upland game.

Objective 3 was not implemented in this segment. The Grant Agreement budget for Objectives 1 and 2 was underestimated and used up the funds intended for Objective 3. The apportionment for Wildlife Restoration Act funding was insufficient to increase the segment budget for Objective 3 and the task could not be implemented with only state funds, which were also insufficient.

Location of Work Performed: Statewide.

Actual Cost:

INTRODUCTION

The objective of Utah's upland game management program is to provide recreational hunting opportunity for sportsmen within the limits of the annual harvestable surplus for each species. It is based on the knowledge that populations of upland game experience relatively high rates of annual turnover. High reproductive rates are naturally compensated for by high death rates, whether hunting is allowed or not. Annual surveys are conducted to measure the production, trend, and harvest of each upland population.

This is the thirtieth Annual Upland Game Report. It is an annual performance report of information compiled during inventory and harvest surveys conducted under Federal Aid Project W-16-RD-4. Information contained herein was collected and compiled by biologists, conservation officers, wildlife managers, and upland game management staff of the Utah Division of Wildlife Resources.

This report serves as a handbook of inventory and harvest data. It is designed primarily for the use of those concerned with the management of upland game. A separate section is devoted to each species of upland game in Utah. Data are presented primarily in tabular form with limited narrative.

During 2000, a total of 54,716 Utah sportsmen spent 415,820 days afield in pursuit of various upland game species (Table 1). The harvest of upland game totaled 471,158 animals. The proportion of the total upland game hunters that pursued each species is shown in Table 2 and the percentage failing to bag at least one bird of each species is in Table 3.

The regulations for 2000 upland game hunting seasons are shown in Appendix C.

GENERAL HARVEST QUESTIONNAIRE

Harvest statistics were obtained from a random sample of licensed hunters by their response to a hunter-harvest questionnaire. Questionnaires were sent by postal mail and hunter response was tabulated. General upland game harvest was obtained with one survey, while species that required special permits were obtained with another survey.

A total of 14,181 upland game questionnaires were mailed to randomly selected licensees. This represented a 16.37 percent sample of licensed hunters for the year 2000 (86,631). A total of 4,555 useable upland game questionnaires were returned. Of those, 1,702 purchased a license, but did not hunt upland game. By dividing the total of 86,631 eligible licensees by the usable returns (4,555), a projection factor of 19.01888035 is derived.

For special permit species (Band-tailed Pigeon, Wild Turkey, White-tailed Ptarmigan, Sage-grouse, and Sharp-tailed Grouse), all permittees were sent questionnaires and results were obtained from the returned responses.

Table 1. Summary of harvest statistics from the general mail questionnaire for 2000.

Species	Hunters Afield	Total Harvest	Hunter-Days Afield	Bag Per Hunter-Day	Bag Per Hunter For Season
Pheasant	41,074	60,108	114,226	0.53	1.46
Mourning Dove	23,916	227,148	79,356	2.86	9.50
Band-tailed Pigeon	53	158	159	0.99	2.98
Chukar Partridge	14,056	36,458	45,096	0.81	2.59

*Although Band-tailed Pigeon, Sage-grouse, Sharp-tailed Grouse, Wild Turkey, and White-tailed Ptarmigan harvest was determined by separate questionnaires, it is assumed that these hunters are derived from the same group of hunters who reported hunting other upland species.

Table 3. Percent of hunter trips resulting in failure to bag at least one bird, 1961-2000.

^a*Numbers are based on harvest questionnaire results and have not been projected to represent all upland game hunters.

*Numbers a
(1961-1999)

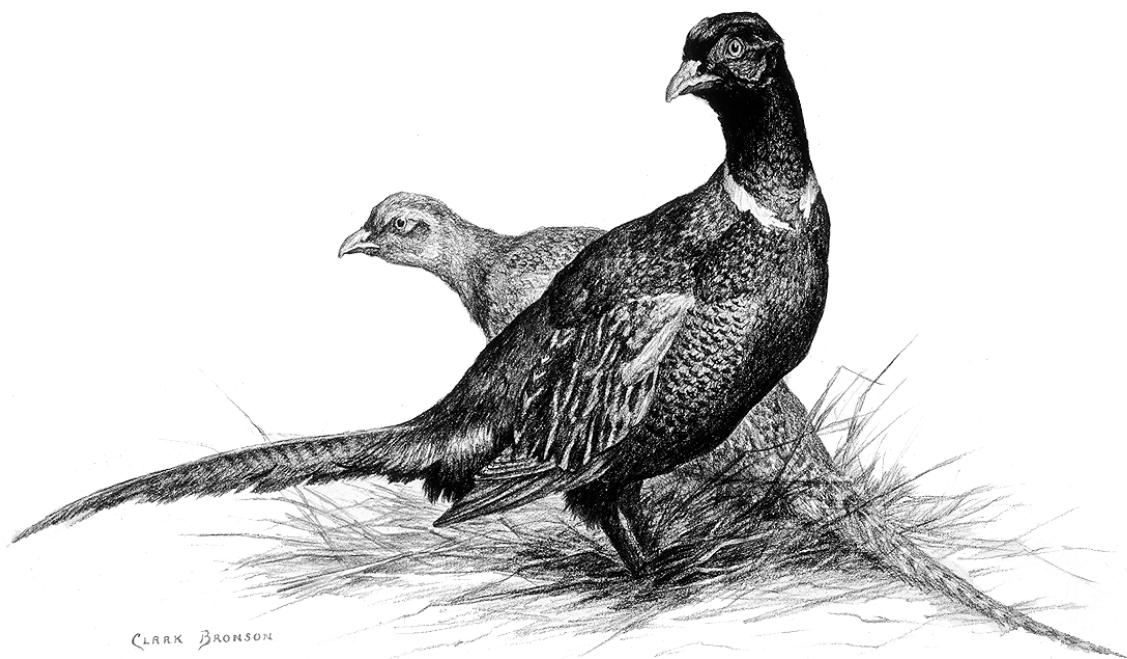

The upland game questionnaire is designed to monitor statewide harvest trend from year to year. The more extensively a species is hunted, the more accurately the questionnaire measures the trend data. In an effort to improve the accuracy of the indices for species that receive very little hunting pressure, and that have low densities and distribution, a unique questionnaire is generated. Each species of this type must be hunted using a special permit so that hunter information can be obtained for survey purposes. This method is used for Band-tailed Pigeon, Sage-grouse, Sharp-tailed Grouse, White-tailed Ptarmigan, and Wild Turkey.

The annual harvest report is sometimes criticized for being inaccurate and without value. However, report users must recognize that the accuracy of the questionnaire is based on some basic assumptions. These assumptions are: (1) the returned usable sample is a completely random sample, (2) respondents recorded the data correctly, i.e. they clearly understood the questionnaire, (3) respondents recorded data accurately, and did not guess or lie, and (4) respondents correctly identified the species hunted. If these assumptions are not met, projections or harvest by county may be over-estimated due to non-response or memory biases. Extreme caution should be used in the interpretation of estimated harvest and hunters for specific species in specific counties. Rather, the long-term trend in these indices should be used in managing the populations.

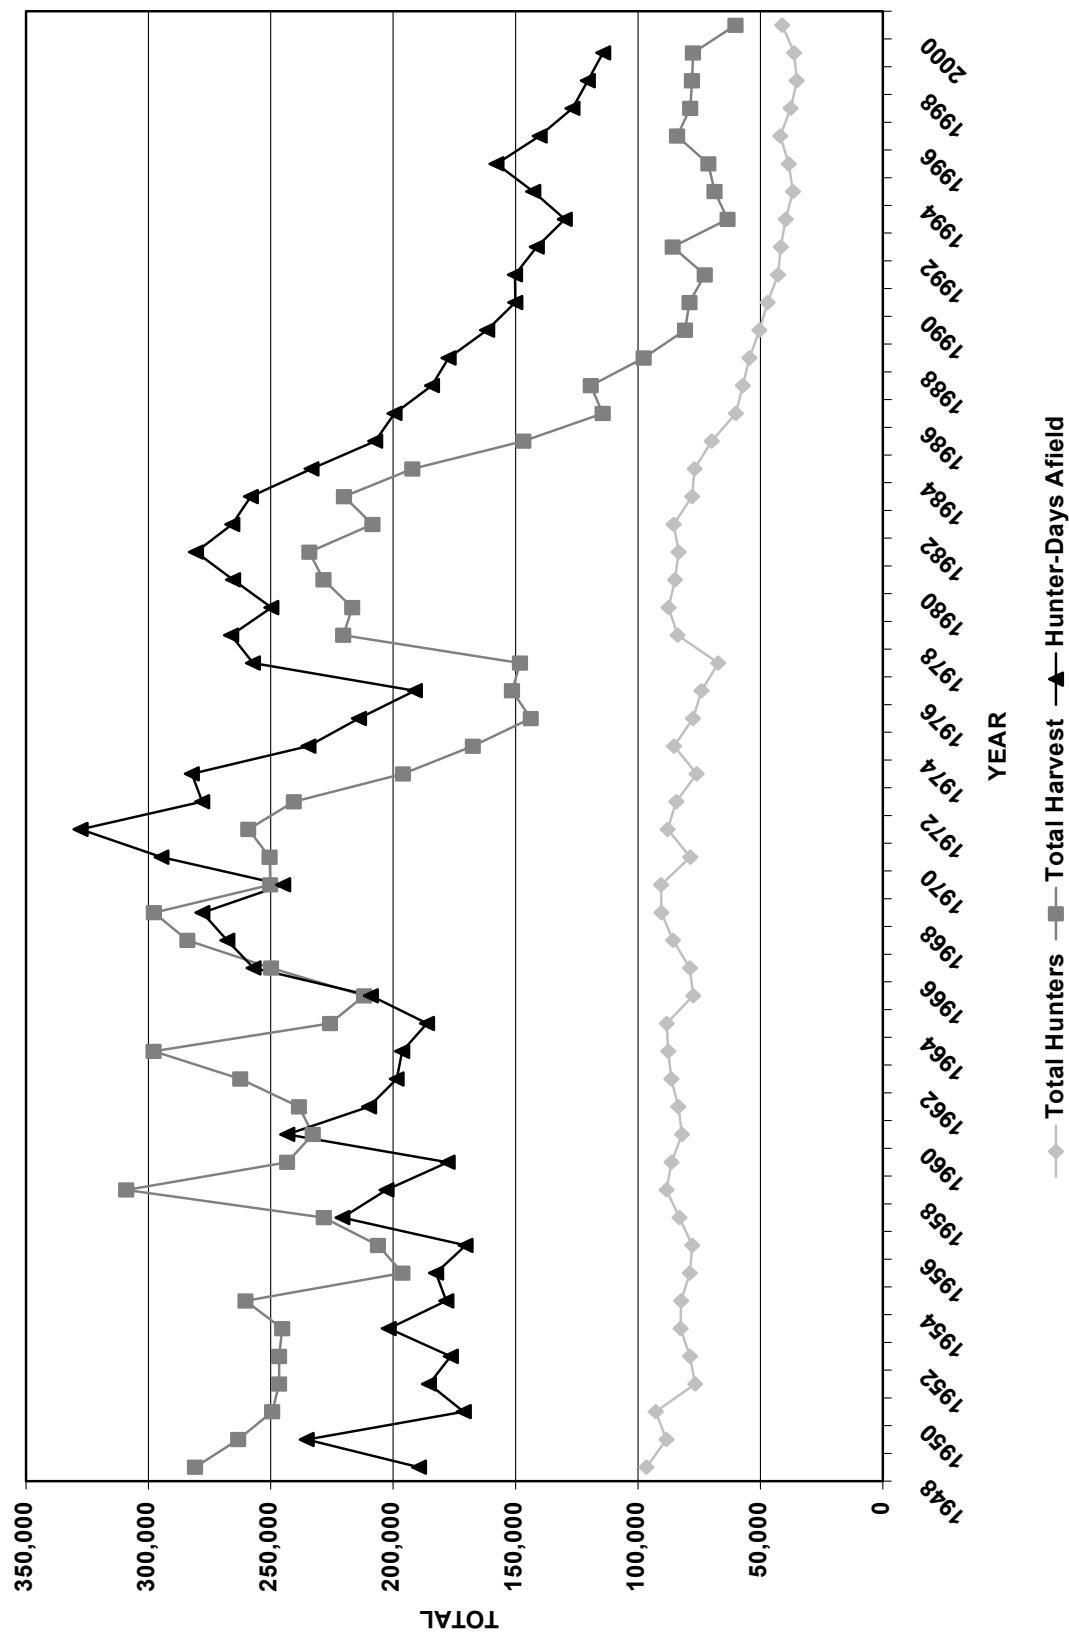

Presently, the Upland Game Annual Report contains the best data available and therefore constitutes the basic facts of upland game management. Although this report has its limitations, the trend data is valuable in making professional judgments regarding upland game populations and harvest.

The annual report is used in wildlife planning. It can be used to establish relative importance among species and for developing new resources through transplants or habitat developments. It points out areas of needed research by indicating problems and possible causes. It documents population trends and it combines all this inventory information into one easily accessible publication. Thus it is used extensively by federal land management agencies in environmental impact statements and management plans. It will become increasingly more important in developing management plans and assessing impacts on wildlife habitat.

*Based on the number of hunters bagging one or more turkeys.

**Total permits were sold on a statewide basis and not by unit, 1968-93. In 1994, permits were sold by unit.

***Beginning in 1994, a limited entry turkey hunting program was initiated.

Statewide summary of fall Merriam's Wild Turkey harvest statistics, 1964-2000.

*During 1968, the Boulder Mountain and East Zion units had two-bird season limits and the LaSal Mountains a one-bird limit; from 1969 through 1972, all areas had a two-bird limit. Hunter success was based on the number of successful hunters rather than total turkeys bagged.

**No fall season since 1985.

APPENDIX B

LICENSE SALES

Small game and Combination license sales by type and cost are listed in Table 1. The proportion of Utah's population hunting small game is declining (Table 2). In the early 1970's, about 9 percent of Utah's population hunted small game.

Table 3 identifies revenue generated to the Utah Division of Wildlife Resources from small game license sales.

Table 1. Statewide small game license sales information, 1954-2000.

Year	Small Game				Combination License			
	Adult Resident		Juvenile Resident		Non-resident			
	Issued	Cost	Issued	Cost	Issued	Cost	Issued	Cost
1954	12,990	\$3.50	5,170	\$2.00	561	\$15.00	79,574	\$6.00

Total Federal duck stamps sold does not include those sold during the second quarter, Apr-Jun, because persons purchasing stamps during this quarter tend not to be hunters.

²Half of the juvenile small game license sales were attributed to waterfowl hunters. Federal duck stamps are not required of juveniles less than 16 years of age.

³Combination license values are based on the assumption that all waterfowl hunters purchased only combination licenses. They may fish and hunt big game but they do not hunt any other small game. Therefore, duck stamp sales are subtracted from combination license sales when projecting revenue generated. The proportion of the combination license fee attributed to small game equals the resident small game license fee divided by the resident fishing license fee, plus the resident small game license fee.

⁴Value does not include cougar, bear or wild turkey permits, habitat authorization, or cooperative wildlife management unit or commercial hunting area license fees. It does not include NRSG revenue - this is assumed to be primarily non-resident bear and cougar hunters.

APPENDIX C

**PERMIT NUMBERS, SEASON DATES, BAG AND
POSSESSION LIMITS, AND AREAS OPEN**

2000 Upland game season dates, bag and possession limits, and areas open (Utah Upland Game Proclamation 2000/2001).

Species	Season Dates	Bag Limit	Possession Limit*	Areas Open	Notes
				• Statewide, except closed areas.	
	Nov. 4 - Nov. 19, 2000	2	2 bag limits	• In Weber County, the Willard Bay WMA, and in Duchesne County, the Mallard Springs upland game hunt will be conducted on these VMAs on Nov. 11. These areas will reopen to general public hunting on Nov. 12.	• Males only may be harvested. • Hunting begins at 8 a.m. on opening day.
