“Finding out how many there are left is the least of the purposes of game census.

Measuring the response of game populations to changes – deliberate or accidental – in their environment is the big purpose.

Continuous census is the yardstick of success or failure in conservation.”

Aldo Leopold, 1932

TABLE OF CONTENTS

Definitions	1
Introduction	2
Methods	3
Results	4
Band-tailed pigeon	8
California quail	13
Chukar partridge	19
Cottontail rabbit	27
Dove	35
Forest grouse	48
Gambel's quail	56
Hungarian partridge	63
Ring-necked pheasant	69
Sage-grouse	75
Sandhill crane	95
Sharp-tailed grouse	100
Snowshoe hare	108
White-tailed ptarmigan	114
Wild turkey	119
Appendix A: Weather conditions	132
Appendix B: Hunter-harvest survey response summary	137
Appendix C: License sales	140
Appendix D: Permit numbers, season dates, bag and possession limits, and areas open	143

DEFINITIONS

General upland game: Upland game species that can be hunted with a basic hunting or combination license and do not require any additional, species-specific permit. Upland game species in this category include chukar partridge, cottontail rabbit (desert and mountain), doves (mourning and white-winged), forest grouse (dusky and ruffed), Hungarian partridge, quail (Gambel's and California) ring-necked pheasant, and snowshoe hare.

Special permit upland game: Upland game species for which an additional, species-specific hunting permit is required, in addition to a basic hunting or combination license. Species in this category include band-tailed pigeon, greater sage-grouse, sandhill crane, sharp-tailed grouse, white-tailed ptarmigan, and wild turkey.

Year: This annual report covers the state fiscal year period July 1, 2011 through June 30, 2012 (hereafter referred to as 2011–12). All upland game surveys, inventories, and hunting seasons within this time frame are presented here. This report presents all data from the hunting seasons that were outlined in the 2011–12 Upland Game Guidebook. Year designations in specific tables refer to the actual time frame of that survey / hunting season. For example, hunting seasons that occurred in the fall or the spring will have single year designations (e.g., 2011 or 2012, respectively), while fall/winter seasons will have an overlapping year designation (e.g., 2011–12). NOTE: Previous editions of the upland game annual report presented data from a calendar year time frame, rather than that described above. The change was needed due to the combining of the upland game and wild turkey guidebooks in 2011. As such, this year's report covers two seasons of data for wild turkey harvest, mourning dove call counts, sage-grouse lek counts, and sharp-tailed grouse lek counts.

SAGE-GROUSE AND SHARP-TAILED GROUSE DEFINITIONS

Lek: Sage-grouse or sharp-tailed grouse strutting ground.

Strutting grounds visited: Total number of known sage-grouse or sharp-tailed grouse strutting grounds (leks) that were visited during spring counts, regardless of whether or not birds were actually present.

Strutting grounds occupied: Number of sage-grouse or sharp-tailed grouse strutting grounds (leks) that were active, i.e., grounds where male birds were present during spring counts.

Average males / occupied ground: Average number of male sage-grouse or sharp-tailed grouse that were counted at occupied or “active” grounds.

INTRODUCTION

The objective of Utah's upland game management program is to provide recreational hunting opportunity for sportsmen within the limits of the annual harvestable surplus for each species. It is based on the knowledge that populations of upland game experience relatively high rates of annual turnover. High reproductive rates are naturally compensated for by high rates of mortality, whether hunting is allowed or not. Annual surveys are conducted to measure the production, trend, and harvest of each upland game population.

This is the 38th Annual Upland Game Report. It is an annual performance report of information compiled during inventory and harvest surveys conducted under Federal Aid Project W-65-M, segments 59 & 60. Information contained herein was collected and compiled by biologists, conservation officers, wildlife managers, and upland game management staff of the Utah Division of Wildlife Resources. This report covers the 2011–12 upland game hunting seasons, 2011 turkey season, and 2012 turkey season, as well as inventory and trend surveys that took place from July 2011 through June 2012.

This report serves as a handbook of inventory and harvest data. It is designed primarily for the use of those concerned with the management of upland game. A separate section is devoted to each species of upland game in Utah. Data are presented primarily in tabular form with limited figures.

The upland game harvest survey is designed to monitor statewide harvest trends from year to year. The more extensively a species is hunted, the more accurately the survey measures the trend data. To improve the accuracy of the indices for species that receive very little hunting pressure, have low densities, and/or a limited distribution, a unique survey is used. Each species of that type must be hunted using a special permit so that hunter information can be obtained for survey purposes. Species falling into this category include band-tailed pigeon, greater sage-grouse, sandhill crane, sharp-tailed grouse, white-tailed ptarmigan, and wild turkey.

The annual harvest report is sometimes criticized for being inaccurate and without value. However, report users must recognize that the accuracy of the survey is based on 4 basic assumptions: (1) the survey sample is completely random; (2) respondents clearly understood the question; (3) respondents recorded or remembered data accurately, and did not guess or lie; and (4) respondents correctly identified the species hunted. If those assumptions are not met, projections or harvest by county may be over-estimated due to non-response or memory biases. Extreme caution should be used in the interpretation of estimated harvest and hunters for specific species in specific counties. Rather, the long-term trend in these indices should be used in managing the populations. Presently, the Upland Game Annual Report contains the best data available and therefore constitutes the basic facts of upland game management. Although this report has its limitations, the trend data is valuable in making professional judgments regarding upland game populations and harvest.

The annual report is used in wildlife planning. It can be used to establish relative importance among species and for developing new resources through transplants or habitat developments. It points out areas of needed research by indicating problems and possible causes. It documents

population trends and it combines all this inventory information into one easily accessible publication. Thus it is used extensively by federal land management agencies in environmental impact statements and management plans. It will become increasingly more important in developing management plans and assessing impacts on wildlife habitat.

METHODS

General upland game harvest statistics were obtained from a random sample of licensed hunters using an Internet-based survey, followed by a telephone survey for non-response bias. The sample was stratified by license type and then the data were projected by the total number of license holders in each stratum. This same methodology was used for the wild turkey survey. Hunters with permits for band-tailed pigeon, greater sage-grouse, sharp-tailed grouse, and white-tailed ptarmigan were surveyed through a separate mixed-mode web/telephone survey. All hunters who obtained a sandhill crane permit were mailed a harvest questionnaire and asked to return it, regardless of success. Some hunters failed to report so harvest statistics are projected by the total number of permit holders for each individual hunt.

In Utah, hunters were required to purchase either a combination license or a basic hunting license before purchasing a species-specific hunting permit or before applying in any drawings. Therefore, only a fraction of hunters who purchased a license actually hunted upland game, and a much larger sample of license holders was required for the upland game harvest survey.

Changes and Corrections

Past editions of the Upland Game Annual Report presented statistics from spring and fall/winter harvest and inventory surveys, aligned mainly with the calendar year. In 2011, the upland game and wild turkey guidebooks were combined, e.g., 2011–12 upland game season information and 2012 wild turkey season information were published in a single guidebook. Therefore, beginning with this year, the seasons published in the Upland Game Annual Report will match the seasons from the guidebook, and the annual report will be aligned more with the state fiscal year (July through the following June) rather than straight calendar year. To reflect this change, two seasons of wild turkey harvest information, 2011 and 2012, have been included in this 2011–12 report. Similarly, two years of sage-grouse and sharp-tailed grouse spring lek count data, as well as two years of mourning dove call count data, are included in this annual report.

We began to track harvest of Eurasian collared-doves in 2006 as these birds had begun to increase in abundance and distribution throughout Utah. These birds could be hunted year-round, without a license, and did not count towards the aggregate dove bag. Total harvest of Eurasian collared-doves, as estimated in this report, represents only the harvest taken by hunters as they hunted other doves, and does not accurately reflect the total annual statewide kill of these birds. Therefore, for this report, dove trends such as “total doves bagged”, “doves per hunter”, and “doves per hunter-day” only include regulated dove species (mourning and white-winged), and do not include Eurasian collared-doves. Mistakes were found in the 2006 through 2010 upland game annual reports, in which Eurasian collared-doves were inadvertently included in these trend statistics. These errors have been fixed in this report and future summaries for dove harvest and hunting effort will not include Eurasian collared-doves.

Finally, in past annual reports, quail harvest and hunting statistics were a combination of both California quail and Gambel's quail. Beginning with this report, hunt and harvest information will be presented for each species separately. Historical harvest and hunting effort of Gambel's quail were approximated for each year by pulling out all Washington and Kane County hunters, harvest, and days-afield from the total statewide estimates. The remaining estimates of harvest and hunt effort were attributed to California quail. It is possible that some hunters who hunted Gambel's quail also hunted California quail in other counties, in which case total California quail hunters in the historical trends tables would be underestimated. Both species of quail are found in Iron County—all quail harvest in Iron County was assumed to be California quail.

RESULTS

Out of 181,590 licenses sold, 45,916 people were randomly selected for participation in the general upland game harvest survey, representing a 25.3% sample of all licensed hunters in Utah for 2011–12. These hunters were sent an email inviting them to participate in the Internet-based harvest survey. Of those hunters contacted, 10,681 (23.3%) submitted an online harvest survey. A random sample of 5,567 hunters who did not respond to the Internet-based survey were contacted by telephone for the non-response bias correction survey. Survey information for turkey and other upland game species are presented in the table below.

Upland game survey methods and response rates, 2011–12.

Species	Survey method	Permits / licenses sold	Sample size
Band-tailed pigeon	Web/phone	263	125
General upland game	Web/phone	181590	16248
Greater sage-grouse	Web/phone	559	327
Sandhill crane	Mail	242	191
Sharp-tailed grouse	Web/phone	282	138
White-tailed ptarmigan	Web/phone	318	159
Wild turkey 2011	Web/phone	9632	4516
Wild turkey 2012	Web/phone	8310	4811

*See wild turkey section for more details.

A total of 28,617 hunters went afield in 2011–12 in pursuit of various general upland game species. 8,291 hunters hunted wild turkey in 2011 and 7,055 hunted in 2012. Detailed information describing the upland game harvest can be found in the following tables. Regulations for the 2011–12 upland game and 2011 and 2012 wild turkey hunting seasons are shown in Appendix D.

Summary of upland game harvest statistics, Utah 2011–12.

% change from average	-72	-62	-45	-28	31

* Prior to 2011, total annual hunters of California quail were approximated by subtracting the number of Gambel's quail hunters (e.g., hunters who hunted quail in Washington and/or Kane counties) from historical statewide total quail-hunters afield of both species. It is possible that some hunters who hunted Gambel's quail also hunted California quail in other counties, in which case total California quail hunters in this table would be an underestimate (prior to 2011).

*Both California quail and Gambel's quail are found in Iron County. Quail harvest is assumed to be California quail.

**Statewide totals for sample size and hunters afield are not the total of the columns because hunters hunted multiple counties.

% change from previous year	-22	1	4	-2	29
% change from average	-78	-75	-66	-22	16

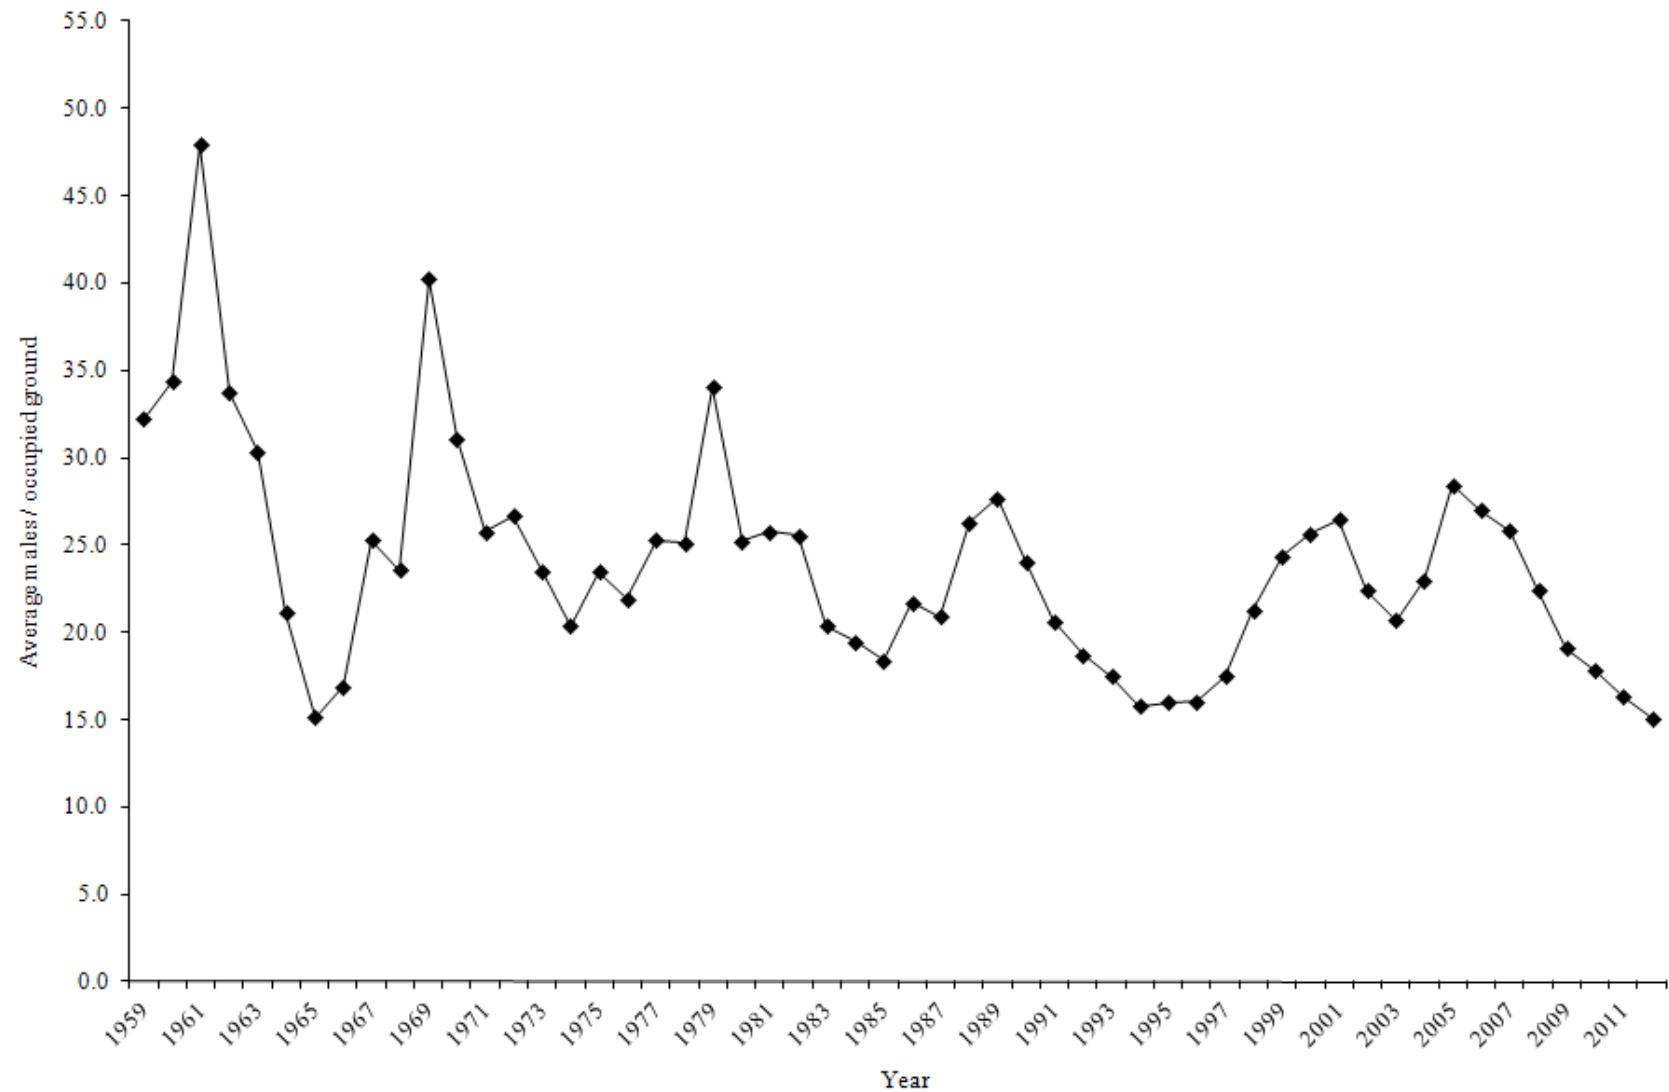

*Starting in 2001, harvest data are likely biased high due to possibility of hunters reporting harvest from commercial hunting areas.

SAGE-GROUSE (Greater and Gunnison)

CARL BRONSON

Statewide trends of average Greater sage-grouse* males per occupied strutting ground, Utah 1959–2012.

*Beginning with the 2010 report, strutting ground count tables were modified to split out Gunnison sage-grouse from Greater sage-grouse. Therefore, this chart has been modified from previous versions to reflect this change.
